

Single-Sourcing Ultimate Chess in MadCap Flare

From Word + DocBook import to a published portfolio artifact

Workflow at a Glance

1. Create the Flare Project

1. Open **Flare Desktop** → **File** → **New Project**.
2. Name the project `UltimateChess`. Choose the **Empty Project** template — a blank template keeps the import clean.
3. Set the project folder to somewhere outside any existing Git repo for now. You will move the *output* into your portfolio repo later, not the project itself.

2. Import the Word Rulebook

1. **File** → **Import** → **Import Word Document**.
2. Point the wizard to `Ultimate_Chess_Rulebook.docx`.
3. On the **Split Topics** step, split at **Heading 1**. This produces 8 topics — one per major section (Overview, Components, Card Battle, King Rules, Sniper Rules, Win Conditions, Dice Variant, Quick Reference).
4. Finish the wizard. Flare creates a topic per H1 and maps H2/H3 to in-topic headings automatically.

3. Import the DocBook XML Section

1. **File** → **Import** → **Import DocBook**.
2. Point the wizard to `ultimate_chess_rulebook.xml`.
3. Import it into a **separate topic folder**, for example `DocBook-Source`. Keeping it separate lets you show both import paths side by side in your portfolio writeup.
4. Compare the DocBook-imported topic against the Word-imported version of the same section (Card Battle works well) — this comparison is a good

portfolio talking point.

4. Organize the Table of Contents

1. Open the **TOC** editor.
2. Drag topics into reading order: Overview → Components → Card Battle → King Rules → Sniper Rules → Win Conditions → Dice Variant → Quick Reference.
3. Rename TOC entries to plain-language labels if the imported heading text is too long.

5. Add Single-Sourcing Elements

Element	Where to use it	Why
Snippet	Card Rankings table, Quick Reference table	Both tables repeat concepts used in multiple topics — a snippet keeps them in sync everywhere they appear.
Condition tag: Standard	Core rules (Overview through Win Conditions)	Marks content that appears in every output.
Condition tag: Advanced	Armageddon rule, Dice Variant	Lets you build a “core rules only” output later by excluding these.

To create a snippet: select the table → right-click → **Insert Snippet** → save as `CardRankings.flsnp` or `QuickReference.flsnp`. Reinsert the snippet anywhere the table is needed instead of copy-pasting.

To create a condition tag: **Project** → **Conditional Text** → **New Tag**. Apply tags to topics or blocks via the **Condition Tag Indicator** in the topic toolbar.

6. Build Two Targets from One Source

1. **Project** → **New** → **Target**.
2. Create target `UltimateChess-HTML5` → output type **HTML5**.
3. Create a second target `UltimateChess-PDF` → output type **PDF**.
4. Build both (**Project** → **Build Target**). Confirm both outputs render the same content from the same topics — this is the single-sourcing proof point for your portfolio.

7. Publish the HTML5 Output to GitHub Pages

Your portfolio site lives at `edwardmcham.github.io`. Publish the Flare HTML5 output as a subfolder so it sits alongside your other portfolio pages.

1. Locate the built output, typically:
`<FlareProject>/Output/UltimateChess-HTML5/`
2. Copy that folder into your portfolio repo:

```
cp -r "<FlareProject>/Output/UltimateChess-HTML5" \  
~/repos/edwardmcham.github.io/portfolio/ultimate-chess
```

3. Commit and push:

```
cd ~/repos/edwardmcham.github.io  
git add portfolio/ultimate-chess  
git commit -m "Add Ultimate Chess Flare HTML5 output"  
git push origin main
```

4. Confirm GitHub Pages is set to build from the branch/folder that includes portfolio/. Check under repo **Settings** → **Pages**.
5. Visit <https://edwardmcham.github.io/portfolio/ultimate-chess/> and verify the output loads.
6. Link to it from your portfolio landing page, and note in the write-up that the PDF target builds from the same source topics — link the PDF too if you want a downloadable version.

Before Wednesday

- ☐ HTML5 output loads correctly at the published URL
- ☐ PDF target builds without errors
- ☐ One paragraph on your portfolio page explaining the single-sourcing pipeline (Word + DocBook → Flare → HTML5 + PDF)
- ☐ Rules double-checked against your intent — no proprietary SteelCloud content anywhere in this project

Learning Resources

Resource	Best for
MadCap Flare Getting Started Tutorial (PDF)	Step-by-step first project, built into Flare's Start Page
MadCap Flare Video Library	Short videos: Start a Project, Single-Sourcing, XML Editor
Flare's built-in Start Page → Tutorials tab	"How Did You Do That?" topics matching Flare's own factory templates
MAD Flare Certification	Structured, deeper training if you want it after the interview
